

## CLIMATE CHANGE,

## DECENT WORK AND

## WORKERS HEALTH

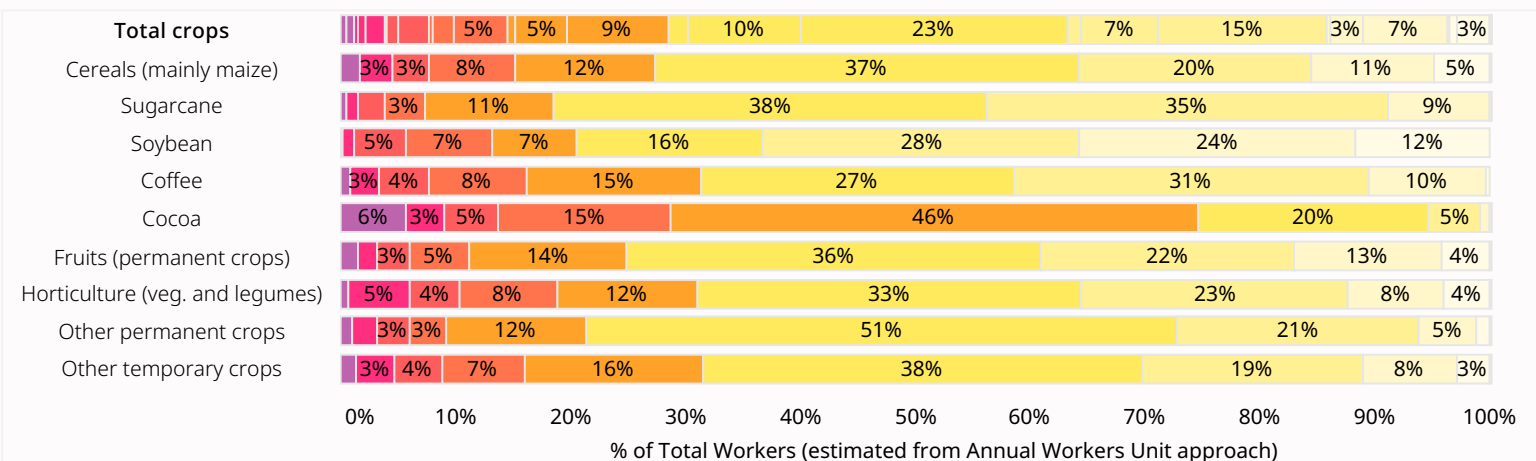

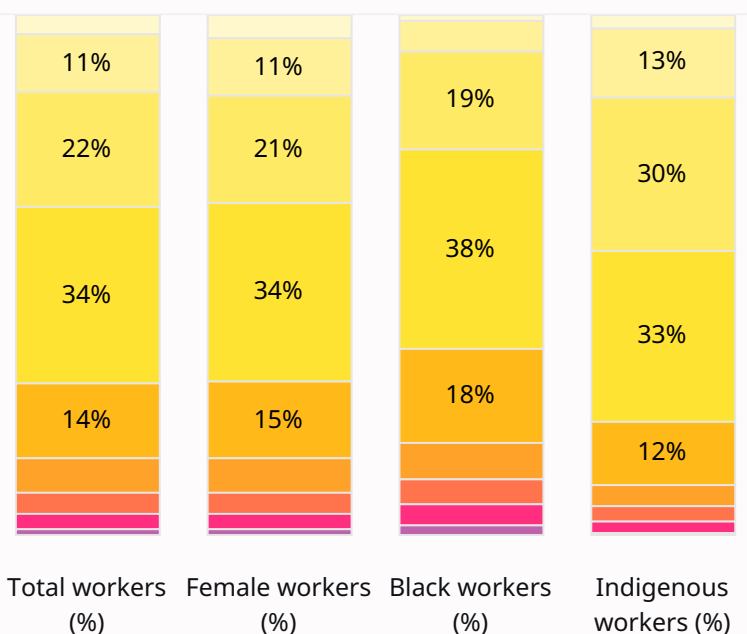

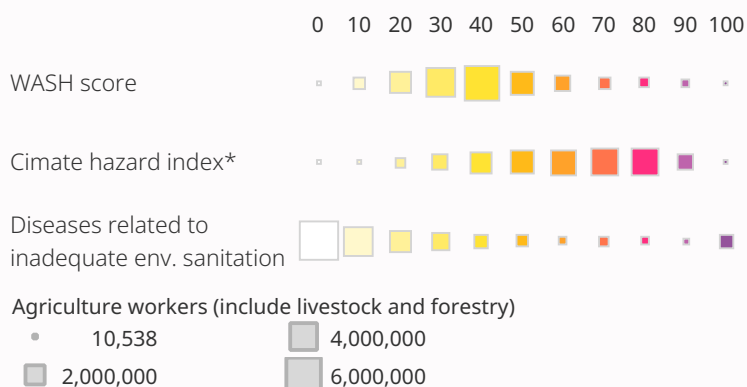

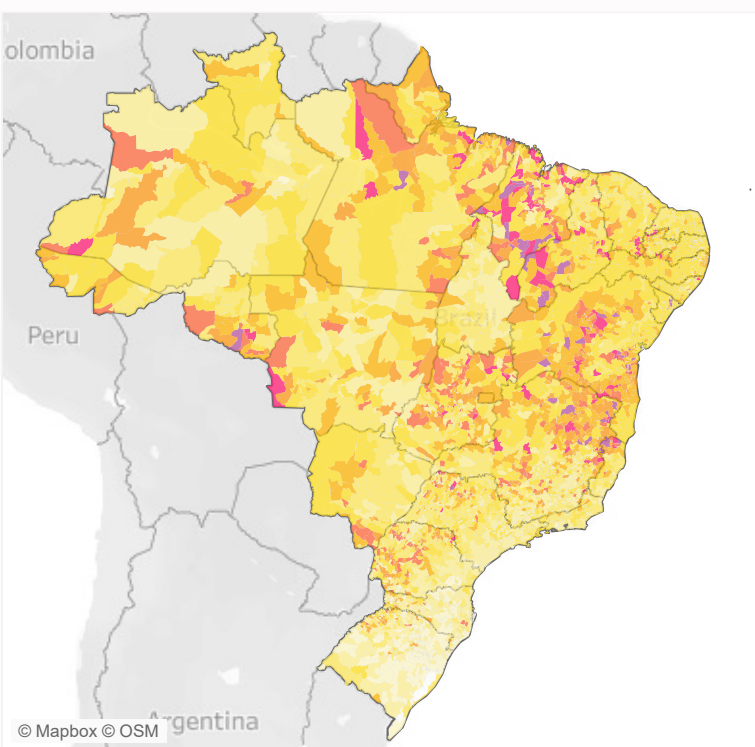

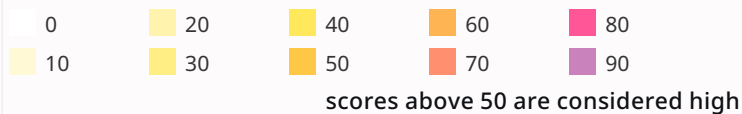

## WASH

Primary Health Impact: Diarrhoeal diseases, parasitic and skin infections, dehydration, and heat-related illness.

Deficient WASH (water, sanitation, and hygiene) facilities expose to infections, heat stress, and chemical contamination. Climate hazards worsens these health risks by increasing water scarcity and the spread of water and vector-borne diseases.

WASH score is estimated by integrating Climate Hazard Index\* related Variations in water availability based on water scarcity [2], Diseases related to inadequate environmental sanitation (100 thousand inhabitants) [3]

## WASH
